

360° SCREENS™

This unique projection screen produces a perfectly viewable image on both sides at the same time with 180° angle of visibility, creating the world's first 360° projection surface. 360° is another high gain screen material, which still performs well in areas where there is high ambient light. This screen material can either be used as a front or rear projection solution offering increased flexibility for those difficult installs. 360° is available as a glue-backed raw material cut to size off the roll or in 3 other standard formats:

- Rigid Clear Acrylic Screen
- Portable Presenter
- Electric Roll-up Screen with RF Remote Control
