

# HIGH GAIN™ INTERACTIVE WHITE BOARD

Pro Display offer Interactive Whiteboard solutions primarily for training / educational displays. This includes our new High Gain screen which is a specially formulated rigid flat front projection screen providing high brightness, excellent contrast and good colour reproduction in high ambient light levels. This unique screen technology offers superior performance to conventional screens, making it the ideal choice for all front projection applications. An optical surface is cast on both sides to create a dual projection surface with 180° visibility. This screen disperses light more evenly across the surface area which also means it is the ideal screen choice for all short throw projectors. This screen was specifically designed to work as a high gain solution for interactive whiteboard applications. Standard 67", 84" and 100" framed screen sizes available complete with a simple to fit self locking wall frame in either a black or silver finish.

## FEATURES

- » Infrared Touch Technology
- » Peak Gain - 6
- » Plug and Play USB Connection
- » Windows XP / Vista Compatible
- » 5mm (0.2") Rigid Acrylic
- » Tough / Resilient Surface
- » Colour - White Matt
- » Supports Short Throw Projection

## BENEFITS

- » Sizes from 30" to 120" (4:3 and 16:9)
