

INTERACTIVE PROJECTION FOILS

Pro Display's Interactive Projection foils transform any glass or acrylic surface into a touch screen, making them the ideal choice for interactive store window displays. The optically clear foil has an electrostatic cling liner laminated to the surface, making it ideal for both permanent and temporary applications. The Interactive Foils are designed for rear projection applications and come as a kit which can be simply installed within minutes. Each Interactive Projection Foil comes with one of four types of projection material laminated to the surface:

Sunscreen – sun readable screen for applications in direct sunlight.

Pro Diffusion – high contrast screen for general display / window applications.

High Gain – high gain screen for general display / window applications.

Clearview – transparent / holo screen for general display / window applications. Our Interactive Foils offer greater stability and reliability than other competing projected capacitance foils in the market. Our upgraded software and driver with USB connection have been digitally approved by Microsoft. Now available - Ultra Gain front projection Interactive Foils.

Ideal for use with Soundpods

FEATURES

- » Projected capacitance technology
- » Works on glass up to 20mm thick
- » Response speed - 50 - 100ms
- » Durable flexible foil
- » USB v1.1 and v2.0 compatible
- » CE , UL and RoHS compliant
- » Windows 2000 / XP compatible

BENEFITS

- » Sizes from 30" - 67" (4:3 and 16:9)
- » Custom sizes available up to 82"
- » Digitally approved by Microsoft
- » 3 screen types available
- » Works with gloved hands
- » Supports all media types
- » Reduced noise interference

APPLICATIONS

- » Store window displays
- » Indoor / outdoor kiosks
- » Glass partitions / office windows
- » Exhibitions / conferences
- » Visitor attractions / museums
- » Touch tables / stands
- » POP and POS Displays

COMPLETE INSTALLATION KIT

Simple installation process - 15 minutes from start to finish (installation guide available)
