

IR TOUCH SCREEN MONITORS

Pro Display produces a range of Infrared touch screen monitors using both LCD and Plasma (PDP) technology. The monitors have an integrated IR frame which uses a matrix of horizontal and vertical infrared beams which pinpoint touch on the screen surface. Infrared touch screen monitors offer high resolution with greater image quality and clarity. Screen sizes range from 26" – 103" diagonal and customers can choose from various brands/specifications to suit their specific requirements. IR touch screens offer faster response times with no drift, a maintenance free technology which provides customers with improved reliability and greater longevity. Install the easy to use calibration software onto your PC, plug in the USB connector and you will be up and running within a matter of minutes (simply plug and play). Screens can be wall mounted or installed on a fixed / portable floor stand.

FEATURES

- » Infrared touch technology
- » High resolution - 4096 x 4096px
- » Scan speed - 50 scans/s
- » Response speed - <16ms
- » Plug and play USB connection
- » LCD or plasma screens
- » Windows XP / Vista compatible
- » Waterproof / vandal proof (IP65)

BENEFITS

- » Sizes from 26" - 103"
- » Custom sizes available
- » Simple calibration
- » Sunlight operable / no drift
- » Maintenance / long life
- » Touch - finger, gloved hand or stylus
- » Supports all media types
- » Wall mount or free standing

APPLICATIONS

- » Training / meeting rooms
- » Information screens
- » Kiosk / POS displays
- » Reception displays
- » Exhibitions / conferences
- » Museums / visitor attractions
- » Boardrooms / classrooms
- » Shops / shopping centres

COMPLETE INSTALLATION KIT

Simple installation process - 15 minutes from start to finish (installation guide available)
