

DESIGNER LCD GLASS STAND

The Designer LCD Glass Stand is manufactured using a special optical glass which changes its visual appearance when an electrical current is activated. A stylish handheld RF remote control switches the glass screen from being clear (transparent) to frosted (translucent), in its frosted state the glass becomes a high definition rear projection screen. This unique screen solution represents the very latest in visual design aesthetics and innovation, creating a very minimalist look and feel, enhancing any contemporary interior. The overall glass size is 1800 x 980mm (71" x 38.6") allowing the display of TV / Video / PC images up to 50" diagonal. An elegant satin silver aluminium base holds the switchable glass in position to create the ultimate free standing display screen.

FEATURES

- » Dimensions - 1800 x 980 x 380mm
- » 10mm toughened glass
- » Satin silver base / top trim
- » Power - 240v (110vac)
- » Power consumption - 7 watts per m2
- » Frequency - 50/60Hz
